DETAILED ACTION

1. This application is in condition for allowance except for the following formal matters:

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 25 USPQ 74, 453 O.G. 213, (Comm'r Pat. 1935).

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

Oath/Declaration

It does not state that the person making the oath or declaration acknowledges the duty to disclose to the Office all information known to the person to be material to patentability as defined in 37 CFR 1.56.

Specifically, applicant's oath/declaration states "material to the examination" and "1.56(a)" when the oath/declaration should state --material to patentability-- and --1.56--.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance: The claimed combination including the limitations of a hydraulic actuation system comprising a valve actuation device dependent on fluid volume in a working chamber for actuation, selectively connecting and disconnecting the working chamber and a fluid reservoir, recording pressure drops in the fluid reservoir, determining a corresponding lift from the pressure drop based on predetermined variables, and forming at least one value pair including the lift of the valve and duration time during connection of the working chamber to the fluid reservoir, is not disclosed or rendered obvious over the art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The IDS (PTO-1449) filed on 25 August 2005 has been considered. An initialized copy is attached hereto.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure and consists of 4 patents.

- Diehl et al. (U.S. Patent 6,321,703) disclose a gas valve exchange controller with upper and lower working chambers and a discharge line.

- Turner et al. (U.S. Patent 6,739,293) disclose a hydraulic valve actuation system to avoid errors in proportional valve positioning.

- Gaessler et al. (U.S. Patent 6,779,496) disclose a hydraulic valve system with a pressure reservoir having a prestressed piston.

- Gaessler et al. (U.S. Patent 6,848,400) disclose a hydraulic valve system with a pressure reservoir having a prestressed piston with a different force-travel curve.
